

## Hotspot update: September 20, 2019

On Friday, September 20, at 3.28 pm, four hotspots were identified within our concession under PT Harapan Sawit Lestari in West Kalimantan. We have subsequently verified that one hotspot was located in an enclaved area owned by community and another hotspot was confirmed to be within our concession. We have deployed our fire fighting team on the ground to help contained the fire in both our concession and community's enclaved area. We have engaged with local authorities on this case and we are investigating the cause of fire within our plantation.

There is no hotspot detected within boundary of our plantation PT Hindoli in South Sumatra and Poliplant Group in West Kalimantan.
